

**SUEK in the coal market:
strategic challenges and recent developments in Far East region**

November, 2009

**Anna Belova, Deputy CEO
Strategy and Corporate Development Director**

SUEK Highlights

• Company

- SUEK is the No.1 coal producer in Russia and in top 10 globally
 - 91.1 mt of coal produced in 2008
 - Proven and probable reserves of 5.4 bt as of 1/1/2007 ⁽¹⁾
- SUEK is one of the largest investors in Russian power sector with controlling and blocking stakes in 3 power companies in Siberia and the Far East with total installed capacity of 12.7 GW

• Coal Business

- SUEK's core business is thermal coal production and distribution
- In 2008, the Company sold 67.5 mt of coal in Russia and exported 28.2 mt
- The principal consumer of thermal coal in Russia is the power generation sector, accounting for 74% of SUEK's domestic sales volume in 2008
- Export customers include leading power generating and other industrial companies and well-established investment grade houses located in more than 30 countries

• Power Business

- SUEK investments in power assets create additional opportunities for synergy in coal business
- 38% of SUEK's total 2008 domestic sales volume was consumed by power companies related to SUEK
- Value of the Company's power assets is predicted to grow going forward as a result of market growth and liberalisation of the electricity sector in Russia

⁽¹⁾ Per SRK Consulting Report as of 1/1/2007.

Russia on world coal market in 2008

Russia has the second largest coal reserves in the world but is only the fifth largest coal producer

World coal reserves distribution

Leading coal producers, mln. t

European seaborne market

Asian seaborne market

Small share but significant potential on Asian market if the logistics constraints are overcome

Global trends: focus on Asia

Asian market will growth dramatically

Source: Wood Mackenzie

*Including Ukraine
Turkey
Israel

- Asian market will grow rapidly during next decade
- European markets will have stable demand
- Russian companies will increase their share on Asian markets

Asian market 2008

Source: Wood Mackenzie

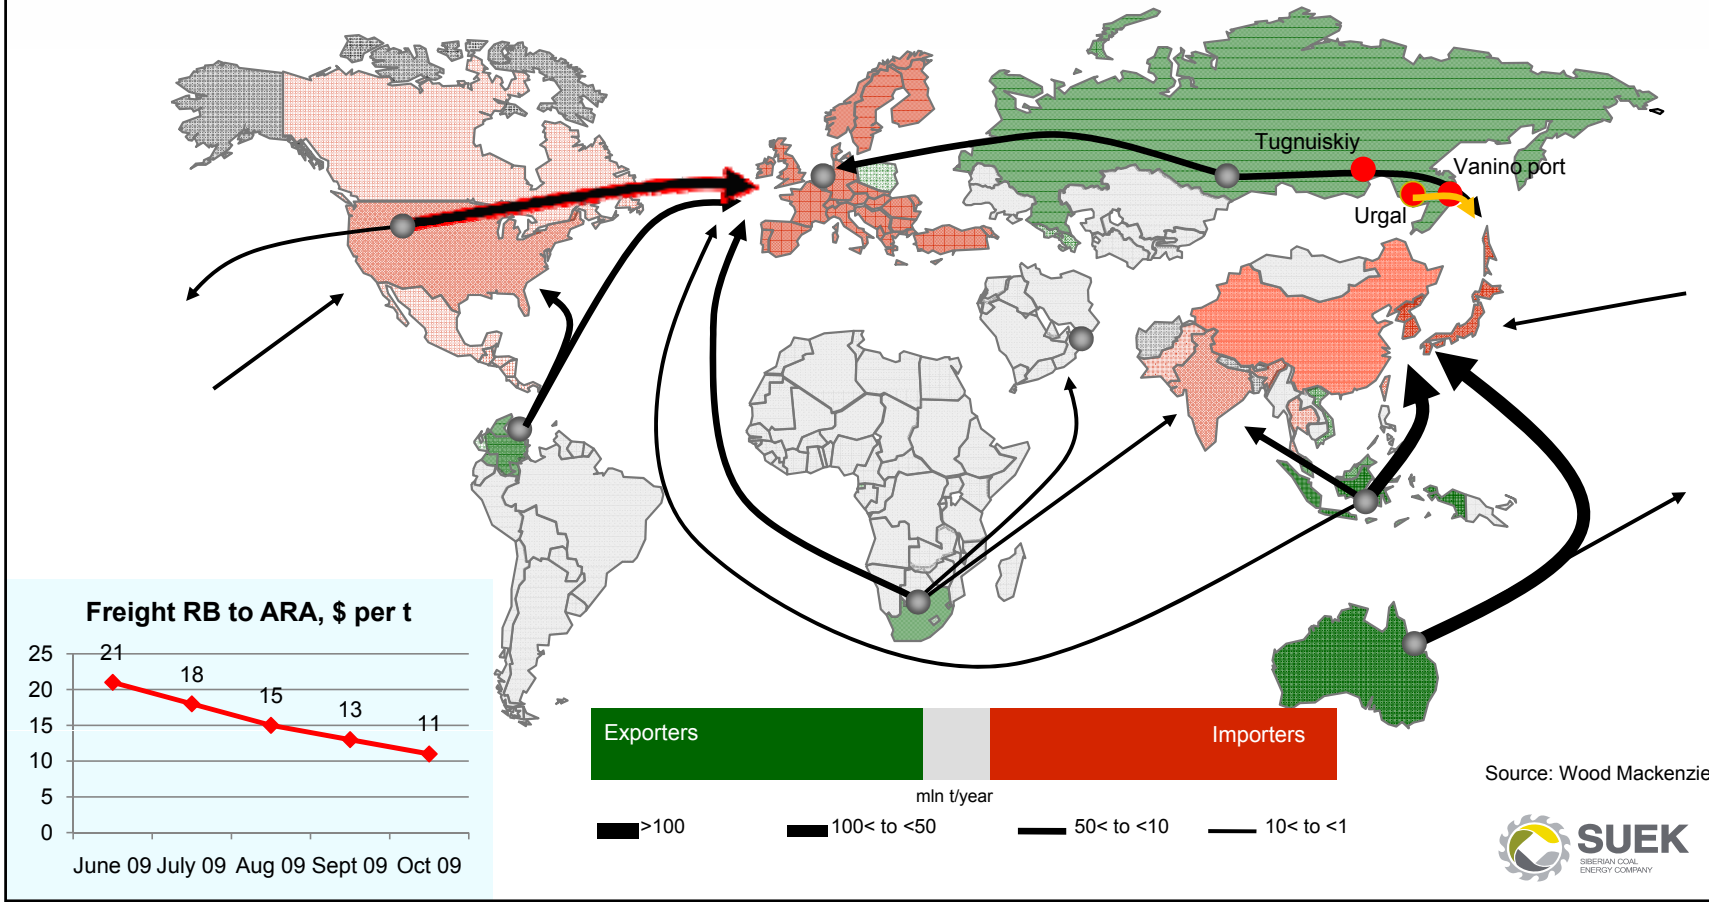

Asian market 2018

Asian market is a key strategic choice for Russian coal companies.

Global trends: cheap freight increase global competition. Focus on cash costs and efficiency.

Decline in freight price will increase global competition. American coal could be shipped to Europe.

Global trends: low gas price

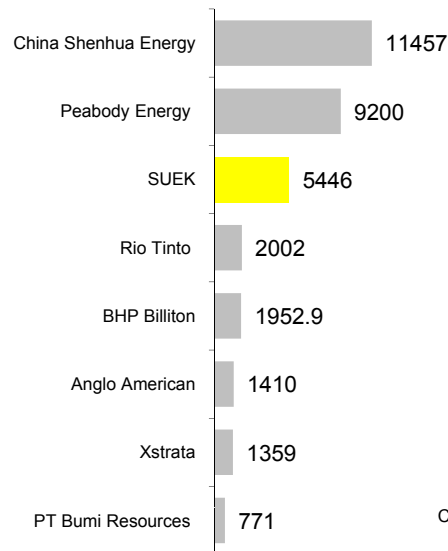

- Shale gas technology breakthrough has accelerated over past year. USA has doubled shale gas production in last decade. Europe is coming.
- Global oversupply of natural gas has dropped gas prices. CERA predicts no serious recovery in gas price before the end of 2010.
- In some cases coal prices could be depressed by low gas prices and wouldn't grow in recent years.

SUEK in global market

- No.3 global reserve holder with proven and probable reserves of 5.4 bt⁽¹⁾
- No.8 global thermal coal producer based on production
- No.7 market position in global export thermal coal market

Reserves, 2008

Trends on Russian coal market

Russian State Energy strategy was accepted on 27 August, 2009

- Decrease gas share in energy balance
- Liberalize gas prices inside Russia
- Increase coal share in energy balance
- Government support to clean coal technologies

Coal production in Russia, mln T

Russian CPT coal price

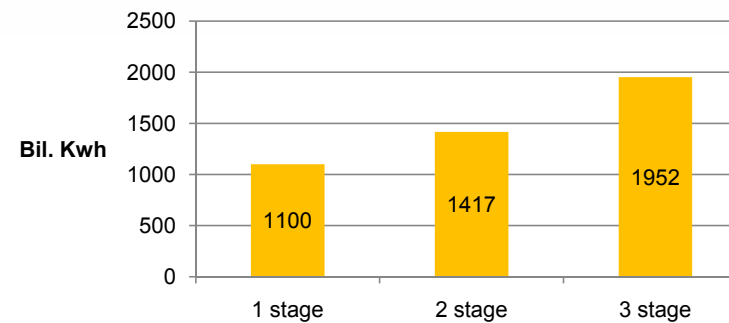

Russian coal production and coal prices in going to increase according government strategy

Trends on Russian coal market

Energy balance

Energy consumption

Coal consumption by thermal power plants, mln.

Russia is going to modernize economics in innovation way and make infrastructure for future growth.

Active development of coal generation is high prospective for coal mining industry in Russia

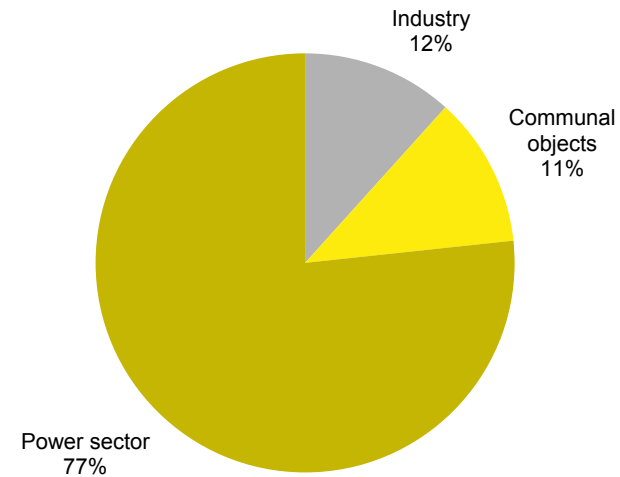

SUEK Position in Russia

- SUEK is No.6 in total fuel production in Russian in 2007
- SUEK's share in Russian power generation is 7% with total installed capacity of 12.8 GW
- SUEK is No.1 in Russian domestic coal market – 28% of Russian coal production and 43% of steam coal

Russian Thermal Coal Market
Total Supply: 144.3 mt⁽¹⁾

Major SUEK Customers in Russia

(1) Excluding import from Kazakhstan (21.3 mt)

Key threats and challenges

- 1 Electricity consumption in Russia and worldwide can be lower than planned as a result of financial crises
- 2 Postponing of the new coal fired power plants construction or fuel switch for the new generation from initially planned coal to gas
- 3 Real growth of gas prices lower than projected, thus gas generation remains competitive to coal
- 4 Logistical constraints, including sea ports and railways
- 5 Growing concerns of environmental implications of increasing coal generation
- 6 Competitive cash costs
- 7 Debt cost and availability
- 8 Ruble strengthening is negative for coal exporters

Environmental concerns of the industry are on the agenda

Historic low focus on ecology due to:

- Vast availability of cheap fuels, especially gas
- Predominant use of gas in powergen with 50% CO₂ compared to coal
- Predominant use of CHP generating lower CO₂ emissions
- Reduction in Russian emissions in 1990s so only now reaching Kyoto 1990 benchmark
- Russian coal is low in sulphur so low SO₂ emissions
- Lack of available Kyoto credits to finance ecology investment

Huge potential of clean coal technologies application:

- Coal mine degasification
- Coal bed methane
- Underground coal gasification
- Bricketting, enrichment etc
- CTL
- Enhanced combustion technologies
- UES enhanced thermal efficiency programm

SUEK in the Far East

OAO «**Primorskugol**»

Coal extraction 4,7 mt, more than 3000 empl.

Vanino Port Terminal

Cargo turnover – 12 mt of coal p.a.

OAO «**Urgalugol**»

Coal extraction 2,3 mt, more than 2000 empl.

34% a share in OAO «**DEK**»

16 power stations with installed capacity 5840 MWt

SUEK meeting challenges– Vanino Port Terminal

Description

- SUEK is completing construction of a coal terminal in the Vaninio Port (Muchke Bay)
- Vanino construction began in 2005 in order to provide capacity for export sales and decrease the risk of non-controlled growth of transshipment costs
- Vanino Terminal main characteristics
 - Cargo turnover – **12 mt** of coal p.a. with potential to increase to **24 mt** p.a.
 - Terminal capacity allows for long-term storage and transshipment of coal directly from railway to sea vessels with 25-170 ths t carrying capacity
- In the first quarter of 2009, total volume of coal transshipment in Vanino reached 370 th t
 - Total 2009 transshipment volume is expected to reach 6 mt, increasing to the full capacity of 12 mt p.a. by 2011

Geography

Russian Far East Ports' Capacities, mt / year

- Vanino will be the second largest coal port in Russia by 2011 with the potential to become No.1 in the long-term

Far East Ports, mt

SUEK meeting challenges – Tugnuiskiy opencast

- Tugnuiskiy opencast, located in Buryatia and Chita Region, is an important mine within SUEK, with hard coal reserves of 120 mt ⁽¹⁾ and 2008 production of 5.8 mt. Nikolskoe minefield with 274 mt proven reserves is close to Tugnuiskiy opencast.
 - 2/3 of production is exported to Asia

Production, mln.t

SUEK meeting challenges – Tugnuisky Washing Plant

Description

- To increase exports, SUEK commissioned building of a new washing plant investing over US\$50m to date
- Construction of the washing plant will allow to decrease ash, moisture and sulphur levels and increase calorific value of the coal produced by the Tugnui mine
- These improvements will significantly improve coal quality and further increase its desirability in the export market
- Plant's capacity is 4.5 mt of coal per year

Tugnuisky Washing Plant

SUEK meeting challenges – Urgal mine

Description

- Urgal mine field has coal reserves of 405mt ⁽¹⁾ and 2008 production of 2,3 mt
- Located in Khabarovsk region
- Investments into increase of coal extraction on Urgal mine and into port Vanino have created new prospects for exports increase

Production, mln.t

SUEK's Integrated Management System

In early 2008 the Company's top management resolved to have an integrated management system meeting ISO 9000, ISO 14000, OHSAS 18000 international standards developed and deployed at SUEK enterprises

In 2009 head office and the biggest enterprises in mining and energy sector were certified.

The certification on international standards ISO 9000, ISO 14000, OHSAS 18000 laid the foundation of management systems integration within SUEK.

SUEK's Integrated Management System

SUEK's Integrated Management System

At the moment, the following documents regulate the integrated management system at SUEK:

- Quality Policy In mining sector
- Quality Policy In energy sector
- Environmental Policy
- Industrial Safety and Labor Protection Policy

The integrated management system determines procedures of the Company's governance and improvement of operation as related to the quality of products, environmental footprint, and ensuring occupational health and safety.

In future, further development, deployment and certification of integrated management systems at all enterprises of SUEK will help ensure consistent management approaches and continuous improvement of the Company's operation in the defined areas.

Labor efficiency, tons/employees/year

Labor efficiency in comparison to other companies, tons/employees/year

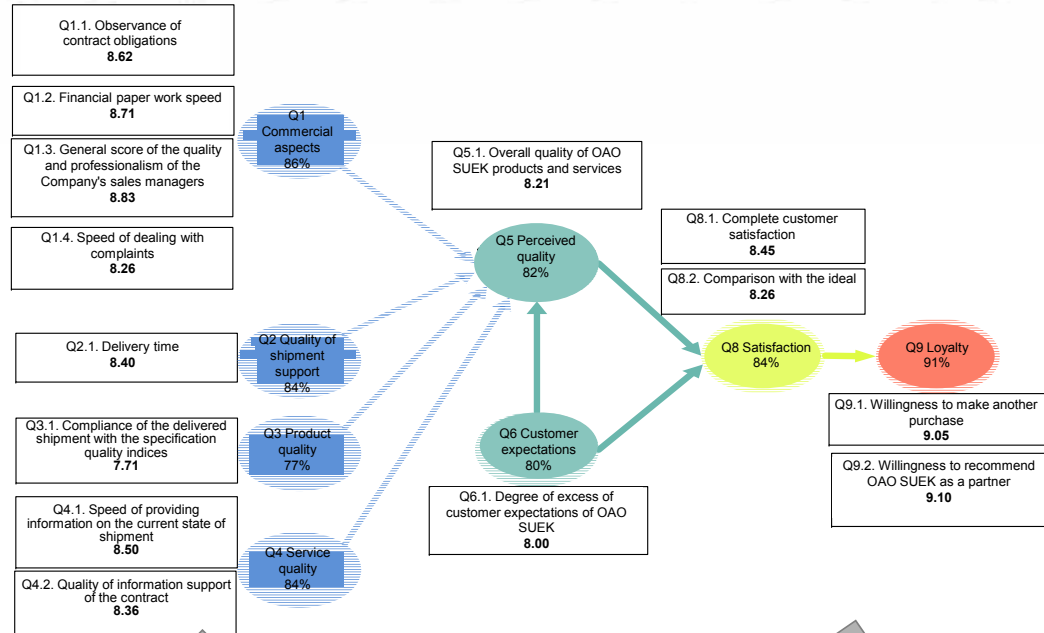

Customer Satisfaction Index

A regular practice at OAO SUEK is monitoring the customer satisfaction index using ACSI methodology.

The Company regularly monitors the customer satisfaction at home and foreign markets.

The methodology helps to track information on the products as perceived by SUEK customers, levels of their satisfaction and loyalty. It also helps to receive timely information about customer needs.

- Home market customer satisfaction level – 73%
- Home market customer loyalty level – 84%
- Foreign market customer satisfaction level – 84%
- Foreign market customer loyalty level – 91%

SUEK strategic development: road to leadership
