

The Future Prospects for the Chinese Economy Indicated by the “Five Development Concepts” (Summary)

WANG Lei

Lecturer, School of Economics and Management, Chuzhou University

The “Five Development Concepts” are the overall component parts related to China’s scientific development concept, of themselves forming a single developmental architecture, and containing within them the reasoning and specific mindset for development. Moreover, they have a synergy through being interconnected. In that sense, the “Five Development Concepts” in China are guiding principles for the development of the society and economy of China, and it is necessary to gain an understanding of the policy content within this area as a way of

understanding the future prospects. In order to deepen the understanding of the source of the thinking for the “Five Development Concepts” and the process of their tangible putting into action, this paper, via a case analysis, relates the process which the “Five Development Concepts” confer to the formulation of regional economic policy and the determination of development methods.
