International Migration in Asia: **Determinants and Nexus with Economic Integration**

Population age structure in host economies a significant driver of migration

| Variables | 0 | LS | Fixed | Effects | GEE (Exchangeable) | | |
|--|----------|----------|----------|----------|--------------------|----------|--|
| | Route 1 | Ronte 2 | Ronte 1 | Ronte 2 | Route 1 | Route 2 | |
| Demographic factors | | | | | | | |
| Working-age population of origin economies | 0.189 | 0.179 | 0.142 | 0.296 | 0.142 | 0.290 | |
| | (0.304) | (0.512) | (0.156) | (0.287) | (0.173) | (0.296) | |
| Working-age population in host economies | 1.010*** | 0.648 | 0.887*** | 0.472* | 0.893*** | 0.482* | |
| | (0.162) | (0.484) | (0.076) | (0.267) | (0.084) | (0.275) | |
| Old dependency ratio of host economies | 0.050*** | 0.053*** | 0.051*** | 0.048*** | 0.051*** | 0.048*** | |

| Interaction term with GDP per capita | | | 0.027* | 0.061** | | | 0.021 | 0.056** |
| | | | (0.015) | (0.025) | | | (0.019) | (0.026) |

Conclusion and Policy Implications

- Population aging of major host economies a significant pull factor drawing migration from Asia, along with income disparity and other geographic and cultural ties.
- Skills complementarity will contribute to sustaining and adding momentum of cross-border labor mobility in the region.
- Economic integration through trade and production chains substitutes labor mobility but higher income through deeper economic cooperation and integration can facilitate migration.
- Effective migration policy and region-wide skills recognition schemes are needed to maximize the gains from migration.
