YANG Jie
Assistant Researcher, Beijing Research Center for Science of Science

This paper relies upon data concerning OECD high technology industry classifications determined by the strength of investment in research and development and the "China Statistics Yearbook on High Technology Industry". In addition to analysis from the overall state of industrial development and the changes in industrial structure, we have shown the current development situation and the characteristics of the historical changes for the high-tech industry in Beijing, isolated its key problems, and proposed ideas for industrial development.
